Mercury

CERES CONJUNCT PLUTO...and the North Node.

Ceres has a 5/6 years cycle depending on retro grade periods. Every 5 years or so she will have to confront her scary son in law Pluto. This is happening right now while this Icelandic Volcano wreaks havoc over European airspace. Currently they are just over a degree apart while Pluto is backing onto Ceres, she will get within 40 minute of belting him one before backing down herself and going retro on the 29th. She will however return to throttle him good and proper on October the 14th overtaking him when they are both direct again.

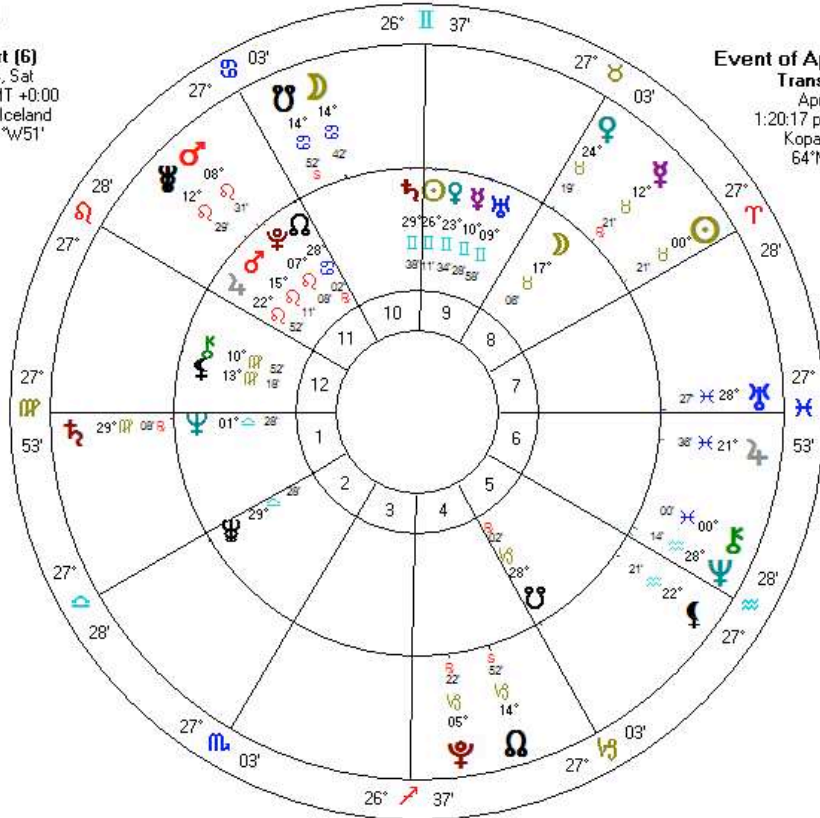

When the Volcano first erupted at [11.32pm local time on the 20th March](#). Pluto and Ceres were still both direct and big players in the eruption. Pluto was sextile the AC by only 8 minutes The sextile can go either way as a harmonious aspect. It has some mercury double- dealing about it. Mercury itself ,the messenger who bridges both the fertile world and the underworld was tightly quincunx the Part Of Fortune. Is this is the message? This aviation Armageddon is going to hit the fortunes of the insurance companies, big business and the airlines. Pluto is also squared Mercury. (76') but strangely Pluto is also trined the Part of Fortune (54') We shall have to see how this plays out.

Ceres is the apex of a T square from a Saturn/Sun opposition. The Sun and Saturn representing bosses and big business. Sun widely conjunct Uranus (The airlines) V Saturn (Insurance companies) Ceres at the apex is pitting these two together and playing referee. The Sun/Uranus (Airlines) gets a trine from Mars and Ceres gets energy from Mars as a karmic quincunx.

.....and so on
